

The Use and Testing of Open-Hearth Steel for Boiler-Making (Paperback)

Filesize: 8.13 MB

Reviews

*This ebook will never be simple to begin on reading but very entertaining to see. It is actually rally exciting through reading period of time. You wont truly feel monotony at at any moment of the time (that's what catalogues are for regarding should you ask me).
(Trevion O'Hara)*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1888 Excerpt: .Ellis, bending-test? whether he meant a quenched bend, the steel being heated, and thrown into the water and then bent. Mr. B. Baker said th-t Mr. Reynolds had raised the question Mr. B-ker, whether the previous compression on steel affected its strength Mr. B-ker. It did not affect its tensile-strength, but it considerably lowered the limit of elasticity. Nothing showed the influence of previous strains on steel better than experiments on long columns. A few years ago he investigated this question, and arrived at some interesting practical results. The resistance to flexure of a solid mild steel column 30 diameters in length varied according to previous treatment as followed: --Tons per squ-re inch. Annealed = 14-5 Previously stretched 10 per cent. = 12 6 compressed 8 . = 22-1 9 = 28-9 Straightened cold =118 These results were very suggestive in many respects which he could not then refer to. Mr. Eeynolds had also noticed the condition of a boiler-plate which was bent cold. It had always been a matter of surprise to him how any one could imagine that a boiler-plate bent cold and not subsequently annealed could have a uniform tension on it under steam-pressure. This could be proved theoretically. If h, l (Fig. 9) represented the thickness of a plate bent cold beyond the elastic limit, the reactions of the different fibres would be indicated by the curved line a, b, c, d, because a sudden change of length occurred at the yielding...
